

# Foreword

## Future planning framework

Auckland city is a fantastic place to live and work.

As lifestyles and communities in the Auckland isthmus change over time, this area of the city needs to evolve in tandem with these changes. For Auckland to continue being a great city, planning for its future is essential.

Predicting how the isthmus will look and function in the future is important to everyone. The council has taken an extensive look at how to best meet the needs of local businesses and residents.

In light however of proposed changes to regional governance, the city has decided not to proceed with a new isthmus district plan.

Instead, the council will showcase the Future Planning Framework project as a potential district planning tool for the new Auckland Council. Four precinct plans will be developed as examples of local area planning, based on the research and feedback gained from the framework project.

Among other factors we took into account, were the growth in Auckland's population, the challenges facing Auckland in terms of lifestyle choices, and our built and natural environments.

By dividing Auckland city into ten geographic areas, the council painted a picture of how we think Auckland city could look over the next 21 years.

Draft plans were shared with the community over eight weeks so people could give their feedback on how the city and their particular areas could grow and change. Nearly 800 individual responses were received offering 1753 comments on aspects of the Future Planning Framework.

In response to the community feedback, changes were made to the draft plan that inform processes such as the district plan review and future capital works programmes.

The council will also prepare position papers that could assist the new council in its preparation of one district plan for the whole region.

Combined, this report together with the four precinct plans and position papers will form uniquely researched planning information to help guide future growth and development of the new city.

Councillor Graeme Mulholland JP  
Deputy Chairperson, City Development Committee  
Chairperson, Future Planning Framework Working Party

# 1 Introduction

## 1.1 What is the future planning framework?

The future planning framework paints a picture of how the Auckland isthmus could look in the future. It shows important elements of the historic urban landscape that need to be respected or protected, how land should be used, and how and where growth and development should occur. While Auckland city includes the Hauraki Gulf islands, this plan is primarily about the Auckland isthmus, which is the mainland part of Auckland city, comprising the CBD and the majority of the city's residential neighbourhoods and business areas. References in this document to Auckland city generally mean the Auckland isthmus. References to Auckland region correspond to the area within the Auckland Regional Council boundaries.

The future planning framework has been developed to support Auckland City Council's overarching vision for Auckland city and its high-level strategies. The vision and strategies reflect the community outcomes defined in the council's 10 year plan. The Framework comprises a synopsis of the research recently completed, a citywide spatial framework and ten area plans.

During the course of preparing the Framework the New Zealand Government announced its intention to create a single unitary council covering the whole of the Auckland region. The Future Planning Framework provides the future Auckland City administration with a basis for developing the future district plan for the Auckland Isthmus. It also provides the new administration with a potential model for other parts of the future city as well.

The district plan is the main instrument governing land use in the city. Other implementation tools include the council's capital works programme, its operational activities, bylaws and advocacy programmes. The Framework has also been designed to inform other council documents and policies such as asset management plans.

Draft plans were shared with the community for an eight-week period commencing mid March 2009 so people could give their feedback on how the city and their particular areas could grow and change. Nearly 800 individual responses were received offering 1753 comments on aspects of the Future Planning Framework. This final document encapsulates some of the ideas offered.

## 1.2 The work so far

Due to the complex issues that the city faces, the council has adopted a three-tiered approach to planning for its future.

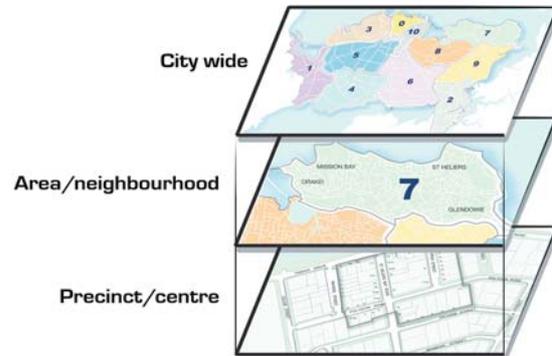

Figure 1: Three tiered approach of future planning framework

The first two tiers concentrate on what should happen at a citywide level and with respect to particular areas (or neighbourhoods) within the city. Work on these two tiers has been incorporated in this future planning framework.

The council will continue to focus on these two tiers (citywide and area). There is more information about them below and in later chapters of this document.

The third tier of planning is at the precinct (or centre) level. During 2009/10 up to four precinct plans will be prepared. The development of these precinct plans is an opportunity to demonstrate the full scope of the Future Planning Framework methodology, while also addressing the needs of some key areas identified in the development of this plan.

The work in completing this plan which includes the citywide and area levels, has encompassed the three elements shown below.

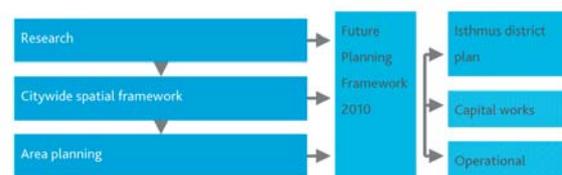

Figure 2: Three elements of the future planning framework

### 1.2.1 Research

Alongside the citywide and area planning, ongoing research is being carried out into matters that affect Auckland city, and how best to plan for and regulate these.

The research and analysis contributing to the development of the future planning framework has focused on:

- the historic urban landscape
- citywide performance analysis
- demographics
- transport
- centres, corridors and employment
- three waters (wastewater, storm water, freshwater).

You can read more about the research findings, and what they mean in terms of planning for the city's future, in chapter 2 of this future planning framework.

### 1.2.2 Citywide planning

The citywide spatial framework expresses spatially and in words the key medium and long-term outcomes for the Auckland isthmus at a citywide level.

The citywide spatial framework applies to the entire Auckland isthmus. It works within the direction set by the council's vision, strategies and key goals to plan for how the city should grow and change in the long-term (up to 2050).

There are three main aspects to the citywide spatial framework:

- research into how Auckland city is performing with respect to the different aspects of community well-being (social, environmental, economic and cultural), including a comparison with similar cities worldwide (summarised in chapter 2)
- a drawing together of Auckland city's community outcomes and the council's vision, high-level strategies, key goals and associated plans, and analysing what they mean from a planning point of view, then using this information to define the key outcomes we want to see happen for Auckland city in the medium to long-term (we call these outcomes key moves; you can read more about them later in this chapter)
- a spatial framework setting out how all the above elements should work together to shape long-term growth and change in Auckland city, in order to create a genuinely sustainable city.

You can read more about the citywide spatial framework in chapter 3 of this future planning framework. Information about the council's vision for Auckland city and the supporting high-level strategies is later in this chapter.

### 1.2.3 Area planning

Ten area plans have been developed for the Auckland isthmus. Each plan relates to a defined area (or neighbourhood) within the city. These areas may or may not correspond to existing ward boundaries.

The 10 areas are:

- Avondale/Blockhouse Bay
- Eastern Bays
- Eden/Albert
- Maungakiekie
- Mt Roskill/Hillsborough
- Newmarket/Parnell
- Otāhuhu
- Remuera/Meadowbank
- Tāmaki
- Western Bays.

Area plans focus on how land could be used, what activities could occur and what outcomes the council is seeking to achieve for each area in the next 10 to 20 years (up to 2030).

The 10 area plans have been integrated with the citywide spatial framework, so that the planned outcomes for each area reflect the key moves that the council is aiming to achieve at a citywide level.

You can read more about the area plans in chapter 5 of this future planning framework.

## 1.3 The council's vision for Auckland city

The future planning framework gives effect to the council's vision for Auckland city as First City of the Pacific. This vision was developed in consultation with the community in 2000.

The vision sums up what Aucklanders want their city to be: a city that people would choose to live in, do business in or visit if they did not already live here.

Figure 3: Vision for Auckland city

The council's vision is supported by a new urban design framework and sustainability policies. You can read more about urban design and sustainability in chapters 2 and 4.

The council faces a number of challenges and opportunities in achieving its vision of Auckland city as First City of the Pacific. These include:

- ensuring economic sustainability
- accommodating rapid population growth
- responding to demand for social and physical infrastructure
- addressing increasing traffic congestion
- preserving the natural environment and resources
- attracting globally competitive businesses
- maintaining residents' quality of life
- managing growth while respecting heritage and sense of place.

The council must use its resources efficiently and effectively while working with other agencies and the community to address these challenges, and taking proactive steps towards making its vision a reality.

In order to make it clear for the community where the council will focus its efforts and how its resources will be used, the council has developed six strategies. These strategies outline the council's high-level directions and priorities with regards to six aspects of life in the city. The strategies are:

- **lifestyle choices** - encouraging and providing diverse arts, culture, sports and events experiences for Aucklanders
- **quality natural environment** – protecting and improving the quality of our unique natural landscape and ecology
- **strong and healthy communities** – providing safe communities, places and events for all Aucklanders to have fun and learn
- **transport choices** – working together to provide lasting transport choices for all
- **quality built environment** – managing Auckland city's growth to ensure high quality urban design and retention of our character and heritage
- **economic development** – acting as a catalyst and creating the right environment for economic growth to deliver jobs and an improved standard of living.

You can read more about these strategies, and how they relate to this future planning framework in chapter 3.

## 1.4 The council's role

The council provides a wide range of infrastructure and services for the city. These combine with what is provided by other public and private sector agencies and businesses to allow the proper functioning of the city. However, no other single agency has the range of functions that the council has, or the degree of responsibility for leadership in city planning. The future planning framework is a plan for the Auckland isthmus that is intended to provide integrated solutions to the key challenges facing the city as it evolves over the next few decades.

The council is committed to managing growth well and making Auckland an internationally competitive city with a great range of choices in areas such as education, employment, housing and leisure. The council wants to help attract new business and events and to make Auckland an attractive place for both existing and future residents and for visitors by looking after its unique natural landscape and other important values. We are particularly committed to protecting the city's heritage and applying quality design principles to the built environment.

All of the agencies, including the council, that are responsible for building and running the city will need to work together to ensure its success and the future planning framework will provide part of the basis for this collaboration both in its formulation and its execution.

## 1.5 Key moves for the Auckland isthmus

A synthesis of existing strategic direction and the work done in the preparation of the future planning framework has resulted in a set of key moves.

While the council has identified a set of strategic outcomes that it wants to see happen in Auckland, these outcomes are broad and relate to all aspects of life in the city, not just matters that are relevant to planning. They also correspond, in the main, to the period covered by the council's 10-year plan (2009-2019).

By comparison, the key moves in this future planning framework are the main outcomes that the council wants to achieve spatially in the medium to long-term up to 2050, and that can be given effect through a district plan for Auckland.

The key moves draw on and relate to the council's strategic outcomes and take the council closer to achieving its strategic goals.

The key moves are listed below.

### **Enhance the Central Business District (CBD) and waterfront**

- integrate business, retail, education, leisure, community, recreation, health and residential uses to make a functional and inviting 'whole'
- promote the CBD as a world-class destination and the gateway to the Hauraki Gulf islands
- reconnect the harbour to the CBD and the CBD to its surrounding suburbs
- create a heart – the CBD as the primary focus of Auckland city's civic, cultural and commercial life.

### **Develop lively centres**

- create a network of high-quality, vibrant, mixed use centres of different size and function
- make centres more accessible
- promote high-amenity, high-quality design that reinforces a sense of place for local communities
- provide services in centres, focusing on those centres and surrounding communities where growth will occur.

### **House our growing population well**

- direct new housing to the right places, focusing growth in or around centres first and along specific corridors and arterials where appropriate
- protect the parts or elements of the city, neighbourhoods and recognised built heritage that are cherished the most
- promote housing choice and high quality building design
- encourage affordable housing that enhances quality of life.

### **Be economically competitive**

- protect existing business land and provide for employment growth
- facilitate higher density employment around key transport nodes and in corridors
- promote clusters of complementary economic activity and ensure that there is infrastructure in place to support them.

### **Connect communities**

- advocate an easy-to-use public transport system that integrates the rail, bus, ferry, pedestrian and cycle networks
- improve transport connections and choices to the CBD and across the city
- support community interaction by providing a network of accessible community facilities close to centres and transport networks.

### **Green the city and protect our heritage**

- recognise and protect those elements of our historic urban landscape that include iconic features, landscapes and groups
- recognise and protect Auckland city's natural and cultural (including built) heritage
- enhance and maintain existing green corridors, and develop new ones
- facilitate access to regional parks and the Hauraki Gulf islands, and enhance the city's beaches
- ensure that key growth areas have enough high-quality public open space for residents, workers and visitors.

The key moves are summarised in the following concept map. A more detailed explanation of how each of the six strategic themes addresses the key moves is provided in chapter 3.

The city centre/CBD will be the heart of the city (shown in red) supported by a CBD fringe, principal centres (shown by red circle) and town centres (shown by orange circle). Most future population growth will be directed to existing and future mixed use and apartment living areas (shown in light orange in the map). These areas are found in and around centres and along corridors and are supported by key transport routes and services.

Future employment growth will also go into the city centre/CBD and other centres, and into business development areas (shown in purple). Business development areas are dedicated to employment uses and protected from other uses that would compete for this space.

This combination of development and transport infrastructure provides a clear future urban form for the city that reflects and respects the historic urban landscape and natural values of the Auckland isthmus.

Ongoing improvements in transport infrastructure and services will provide a sustainable mix of transport options ensuring the efficient movement of people, goods and services.

Long-term growth and development will not be at the expense of the things we value and our quality of life. Key natural features, including our unique volcanic field and coast, will be protected and over time joined up by green links.

## 1.6 Key concepts included in the framework

---

The maps outline the following key concepts relating to land-use:

### Centres

Centres are places of relatively intense land use, which include a diverse mix of uses and perform a multitude of functions. Centres are places where people live, work, shop, socialise and use community services and facilities. A hierarchy of centres has been developed to identify each centre's future role in the centre's network. Types of centres include the CBD, principal centres, town centres, local centres and neighbourhood shops.

### Business development areas

These are employment areas that can support more jobs, a mix of commercial and industrial activities, and that have good accessibility. They are areas in which opportunities for economic growth and additional jobs are promoted.

### Business nodes

Business nodes are located in business development areas. They include office or administrative outcomes focused around rapid transit stops and where possible near to town centres. They support intensive employment uses, but do not provide retail, social and community services other than in support of local business needs.

### Corridors

Corridors display linear connectivity of centres, business and/or residential development, typically of higher densities, supported by accessibility to key transport infrastructure. Types of corridors identified include business corridors, and mixed use (enterprise) corridors of which there are high and medium-intensity sub-categories.

### CBD fringe

The CBD fringe includes those areas immediately surrounding the CBD that relate closely with the CBD due to proximity. This is a complex environment, containing a number of well established centres such as Newmarket, and comprises a mix of residential, retail and commercial activity.

Descriptions of the built form outcomes relating to these key concepts are explained in more detail in chapter 4.

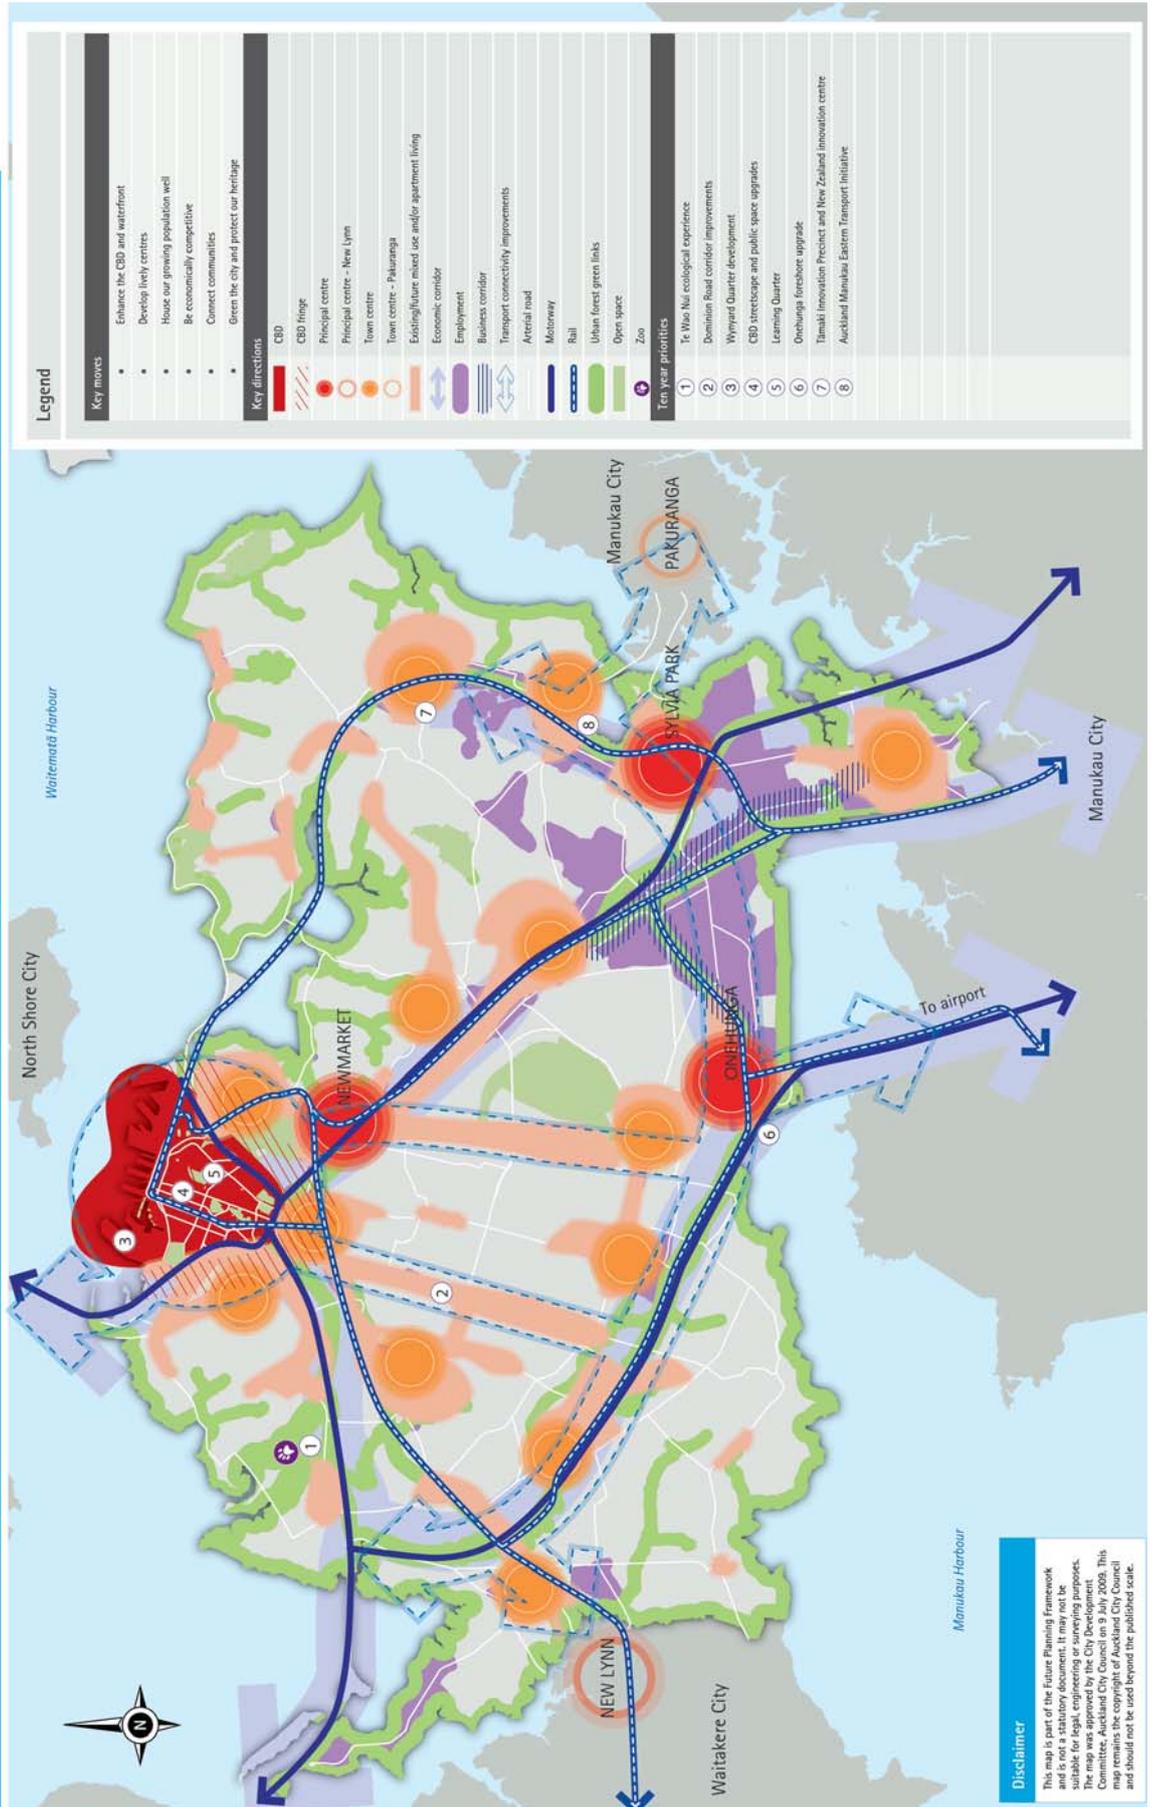

Figure 4. Concept Map (see 6.5 Appendix E for map legends)
